**Subject:** SRS Motorcycle Antenna results

I recently purchased the above antenna and thought I would give you the results.

This is installed on my Harley Davidson 2010 Screamin Eagle FLHTCUSE5 Ultra Classic Electra Glide.

I was sent 2 antenna's, one with the plain round end and one with the pink square end.

The square pink end fit directly into my stock XM antenna fitting so I will be returning the other one for credit.

**RESULTS:**

With my bike in the garage, doors closed, I tried 3 different antenna's mounted on my clutch reservoir and on the inner fairing behind the windshield.

1. Stock internal XM antenna- 0 bars
2. Motorcycle antenna from TSS Radio- 0-1 bars
3. SRS antenna with the pink end- 3 bars

I also stood in front of the antenna at every angle and had no reception loss.

I did not actually try it on the road due to rain but assume results will be good.

I obviously went with the SRS and it looks just fine on a my black bike.

Hope this helps.

Tom
