

SiriusXM Radio 5 Volt Hardwired Power Adapter

The 5V-HPK is designed to work with any Sirius and XM Radio 5 volt portable receiver. The 5V-HPK is a Satellite Radio Superstore exclusive product featuring interchangeable cables that allow you to use the same power adapter with a legacy 5V receiver or a new PowerConnect SiriusXM receiver. Below are basic installation instructions.

Connect the Adapter to Power & Ground in Your Vehicle

The positive wire (Red Wire) gets wired to positive power in the vehicle and the negative wire (Black Wire) gets wired to common or ground in the vehicle. If you experience “engine noise” when you press the gas pedal you may need to move to a better ground source.
